AI Declaration – Deliverable 3

Github: https://github.com/fridauboe/Deliverable_3

We worked toghether at school on most of the assignment, so we did not use GitHub as much during the development process.

Use of Generative AI

We used ChatGPT (OpenAI) as a support tool during this assignment. We worked on most of the tasks and solutions ourselves, but used AI for guidance when we got stuck, encountered errors, or needed explanations of programming concepts.

Part	What we asked about	How AI helped
Tasks 1–3	Character, Dice and Weapon	Explained methods and how the classes work together.
Task 4	Warrior and Mage	Guidance on inheritance, `super()`, mana and armor.
Task 5	Battle	Helped us understand how battle rounds and simulations work.
Debugging	Error messages and testing	Explained errors and suggested ways to fix them.
Documentation	Comments and explanations	Helped with English wording and explanations.
GitHub and submission	Git, GitHub and exporting	Step-by-step guidance on setup, commits and PDF export.

Our Own Work

We developed most of the solutions ourselves and tested the code along the way. We mainly used AI when we needed help understanding errors or how certain functions work. We reviewed the suggestions and checked that the code worked as expected.

Evaluation

AI was most useful for debugging and explaining concepts when we got stuck. It helped us understand why something was not working and how to solve it. We tried to use AI as a guide rather than relying on it to provide complete solutions.
